scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;
 - Requirement is very common, like NumPy;

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;
 - Requirement is very common, like NumPy;
 - Requirement is statisfied by another requirement.

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;
 - Requirement is very common, like NumPy;
 - Requirement is statisfied by another requirement.

This is wrong as you cannot guarantee these assumptions.

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;
 - Not specifying minimum required versions.

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

Code requirements

- Two common mistakes:
 - Not specifying all requirements;
 - Not specifying minimum required versions.
- Both are annoying and tedious to deal with as a user, especially the latter.

```
colorspacious>=1.1.0  
matplotlib>=2.2.4  
numpy>=1.8  
six>=1.10.0
```

```
cmasher>=1.0.5  
e13tools>=0.6.17  
h5py>=2.8.0  
hickle>=3.4.0  
matplotlib>=2.2.4  
mlxtend>=0.16.0  
mpi4pyd>=0.2.4  
numpy>=1.12.0  
pyqt5==5.12.*  
qtpy>=1.9.0  
scikit-learn>=0.22  
scipy>=1.0.0  
sortedcontainers>=1.5.9  
threadpoolctl>=1.0.0  
tqdm>=4.7.6
```

CMasher. Scientific colormaps for making accessible, informative and *cmashing* plots

This is the documentation for the *CMasher* package, a collection of scientific colormaps for making accessible, informative and *cmashing* plots. It is written in pure [Python 2/3](#) and [publicly available on GitHub](#).

The documentation of *CMasher* is spread out over several sections:

- User Documentation
- API Reference

User Documentation

CMasher

Scientific colormaps for making accessible, informative and *cmashing* plots.

```
cmasher.create_cmap_overview(cmaps=None, savefig=None, use_types=True, sort='alphabetical')  
[source]
```

Creates an overview plot containing all colormaps defined in the provided *cmaps*.

Other Parameters:

- cmaps** (list of {str; `Colormap` objects}, dict of lists or None. Default: None) – A list of all colormaps that must be included in the overview plot. If dict of lists, the keys define categories for the colormaps. If *None*, all colormaps defined in *CMasher* are used instead.
- savefig** (str or None. Default: None) – If not *None*, the path where the overview plot must be saved to. Else, the plot will simply be shown.
- use_types** (bool. Default: True) – Whether all colormaps in *cmaps* should be categorized into their colormap types (sequential; diverging; cyclic; qualitative; misc). If *cmaps* is a dict, this value is ignored.
- sort** ({'alphabetical'/'name'; 'lightness'}. Default: 'alphabetical') – String indicating how the colormaps should be sorted in the overview. If 'alphabetical', the colormaps are sorted alphabetically on their name. If 'lightness', the colormaps are sorted on their starting lightness and their lightness range.

Note

The colormaps in *cmaps* can either be provided as their registered name in *MPL*, or their corresponding `Colormap` object. Any provided reversed colormaps (colormaps that end their name with '_r') are ignored.

```
cmasher.import_cmaps(cmap_path) [source]
```

Reads in custom colormaps from a provided file or directory *cmap_path*; transforms them into

- Dusk
- Eclipse
- Ember
- Flamingo

accessible, informative and *cmashing* plots

Colormaps for making accessible and cmashing plots

CMasher is a collection of scientific colormaps for making accessible plots. It is written in pure Python 2/3 and publicly available on [GitHub](#).

API REFERENCE

CMasher

Creates an overview plot containing all colormaps defined in the `cmasher` package.

Other Parameters:

- `cmaps` (list of `[str; Colormap]` objects), dict of list of colormaps that must be included in the overview categories for the colormaps. If `None`, all colormaps are included.
- `savefig` (`str` or `None`, *Default: None*) – If not `None`, the plot will be saved to the file specified by `savefig`. Else, the plot will simply be shown.
- `use_types` (`bool`, *Default: True*) – Whether all colormaps should be included in the overview, regardless of their colormap type (sequential; diverging; cyclic).
- `sort` (`{'alphabetical'/'name'; 'lightness'}`, *Default: 'name'*) – Whether the colormaps should be sorted in the overview. If `'name'`, the colormaps are sorted alphabetically on their name. If `'lightness'`, the colormaps are sorted by their lightness and their lightness range.

Note

The colormaps in `cmaps` can either be provided as the name of the colormap or as the corresponding `Colormap` object. Any provided reverse name with `'_r'` are ignored.

`cmasher.import_cmaps(cmap_path)`

Sequential

Sequential colormaps (that are perceptually uniform of course) are basic colormaps that start at a reasonably low lightness value and uniformly increase to a higher value. They are commonly used to represent information that is ordered. The *matplotlib* package already has a few great sequential colormaps readily available for the user, mainly the colormaps named *viridis*; *plasma*; *inferno*; *magma*; and *cividis*. However, three of these colormaps use the color red as their main color and none of them uses the full lightness range. As it might sometimes be desirable to use a different main color or maximize the lightness range of the colormap, *CMasher* provides a few sequential colormaps that do exactly that. These colormaps are shown below.

Amber

Colormap evaluation: amber

The colormap in its glory

Perceptual derivative

Length: 113.2
RMS deviation from flat: 0.0 (0.0%)

Black-and-white printed

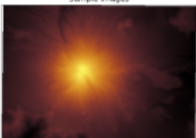

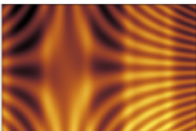

Perceptual lightness derivative

Length: 93.0
RMS deviation from flat: 0.0 (0.0%)
